### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 11, 2004, has been entered.

### **Drawings**

2. The drawings were received on October 11, 2004. These drawings are acceptable.

# Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Application/Control Number: 09/815,377

Art Unit: 2653

5. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Boutaghou et al (US Pat. No. 5521778) in view of Lee et al (US Pat. No. 6236634).

As recited in claim 1, Boutaghou et al show an optical disk drive comprising a housing 10 including a base portion 32, and an actuator assembly (see Fig. 5) having a first end (right end in Fig. 5) and configured for use with an optical disk having information on at least one side, said actuator assembly including a first portion (24 and 25, for example) configured to position said first end of said actuator assembly parallel to the surface of the disk 12, and an optical pick up unit 26 disposed on said first end of said actuator assembly, said optical pick up unit acting to focus a light beam on said optical disk.

As recited in claim 1, Boutaghou et al are silent regarding a second portion pivotally mounted to said first portion and configured to position said first end along an arcuate path substantially perpendicular to the surface of the disk.

As recited in claim 1, Lee et al show a second portion (including 411, for example) pivotally mounted to said first portion (including 403) and configured to position said first end along an arcuate path (see Fig. 14) substantially perpendicular to the surface of the disk.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to add the pivotally mounted second portion of Lee et al to the apparatus of Boutaghou et al as taught by Lee et al. The rationale is as follows: one of ordinary skill in the art would have been motivated to add the pivotally mounted second portion to the apparatus in order to avoid a head crash resulting from a flying height that is too low (see col. 3, lines 45-53), and to avoid a decrease in light beam intensity resulting from a flying height that is too high (see col. 12, lines 18-20) as taught by Lee et al.

Application/Control Number: 09/815,377

Art Unit: 2653

## Response to Arguments

6. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

### Conclusion

7. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julie Anne Watko whose telephone number is (703) 305-7742.

The examiner can normally be reached on Tues, Thurs and Fri 10AM-10PM, alternate Saturdays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William R. Korzuch can be reached on (703)305-6137. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
